

Project Title:	Pevensey and Westham Railway Station
Client:	Network Rail South East Region
Date of Work:	January 2016

Project description

The existing platform required a 4m platform extension to accommodate longer rolling stock.

This necessitated overlaying of the existing platform ramp area to create the additional platform length, installation of rear fence line and access stairs to track.

The entire works were constructed using frp materials and fabricated by Hammond.

Project Constraints
