

Project Title:	Whitchurch Bridge Infill
Client:	Highways England
Date of Work:	2010

Project Description

WHJ/1 is located north of Whitchurch in Shropshire at approximate National Grid Reference SJ550420. The bridge is a single 35degree skew span overbridge with longitudinal cast iron girders and transverse jack arches carrying Black Park Lane over the former railway line. The bridge is of brickwork construction.

The contract involved filling beneath the bridge deck, leaving the super structure in-situ, forming embankments, installing a mammal underpass and undertaking minor parapet repairs.

Project Constraints

- Ecology.
- Planning.
- Public Interface.
- Traffic Management.
- Poor condition of structure.
- 3rd party negotiations (landowners).
